## EMAS

rev. 1 en (13-04-2025)

### EMAS - Eco-Management and Audit Scheme

At **Scent Emotions**, environmental management is not just a commitment — it is part of our identity. Our certification under the **Eco-Management and Audit Scheme (EMAS)** represents one of the most advanced levels of environmental transparency and compliance in Europe.

### Certification History

**Scent Emotions** obtained EMAS registration for the first time in **April 2000**, just one year after our ISO 14001 certification. This milestone reflects our ambition to go beyond standard compliance and adopt a proactive, transparent approach to environmental performance.

Today, we remain fully aligned with the requirements of **Regulation (EC) No. 1221/2009**, continuously updating our environmental statement and ensuring full traceability of our impacts, objectives, and results.

### What Is EMAS?

**EMAS** is the European Union's premier environmental management tool, designed for companies seeking to:

- **Evaluate** and improve their environmental performance
- **Publish verified environmental statements** reviewed by independent auditors
- Comply with stringent **legal and regulatory obligations**
- Increase stakeholder trust through **full environmental transparency**

### Why EMAS at Scent Emotions?

EMAS complements and strengthens our **ISO 14001 Environmental Management System**, allowing us to:

- Set and monitor measurable **environmental goals and KPIs**
- Communicate with clarity through a **publicly available Environmental Statement**
- Engage clients, suppliers, and regulators in **open environmental dialogue**
- Drive **continuous improvement** across energy use, emissions, materials, and waste

Our EMAS system covers all our facilities and processes – from **polymer compounding** and **fragrance integration** to **injection moulding**, **packaging**, and **waste management**.

### **Environmental Statement & Reporting**

We issue and publish a **verified Environmental Statement** in accordance with EMAS requirements. This document includes:

- Our **environmental policy** and **management structure**
- Detailed information on **energy**, **water**, **raw material**, and **emissions indicators**
- Progress toward **sustainability targets** and **resource efficiency**
- Commitments to **climate action**, **eco-design**, and **circular economy alignment**

These statements are validated by an **independent accredited verifier** and made available to authorities and stakeholders.

### **Trust, Credibility, and Value Creation**

EMAS adds unique value for our stakeholders by:

- Enhancing **legal compliance** and **regulatory trust**
- Supporting **public and private procurement** eligibility
- Demonstrating **leadership** in environmental transparency
- Providing assurance to **investors**, **partners**, and **clients**
