ENS

rev. 1 en (13-04-2025)

ENS - National Security Framework (Esquema Nacional de Seguridad)

Scent Emotions is firmly committed to the protection of digital assets, personal data, and public sector collaboration. As part of this commitment, we have formally adopted the **ENS - Esquema Nacional de Seguridad (National Security Framework)**, the Spanish government's reference framework for cybersecurity in systems and services related to the public sector

Declaration of Conformity

In **February 2025**, **Scent Emotions** issued its first **Declaration of Conformity with the ENS**, marking a significant step forward in strengthening our **cybersecurity governance**, aligning with the requirements established by **Real Decreto 311/2022**, and ensuring compatibility with public digital infrastructures.

This declaration affirms that our information systems and processes meet the required technical, organizational, and procedural safeguards for operating in a **secure and resilient digital environment**, especially when interacting with Spanish public sector entities.

What Is ENS?

The **National Security Framework (ENS)** establishes the fundamental principles and minimum requirements necessary to ensure adequate protection of information managed by public sector organizations and their private collaborators.

Its main objectives are to:

- Guarantee the **security of information and services** provided or used by public bodies
- Foster **uniform and interoperable cybersecurity practices** across Spain
- Enable a consistent, risk-based approach to digital service protection
- Ensure **trust and resilience** in digital interactions with the public sector

Scent Emotions' ENS Compliance Covers:

- Management and protection of digital communications and data exchanged with public institutions
- Secure access and traceability systems for administrative and regulatory documentation
- Alignment with **ISO 27001** and **GDPR** principles for full legal and technical compatibility
- Protection of R&D and innovation-related information used in public funding and research programs
- Policies, controls, and measures mapped to the **ENS Basic and Medium security levels**, as required

Benefits for Our Public and Institutional Partners

- **Secure collaboration** with public administrations, universities, and innovation agencies
- Increased eligibility for public contracts and funding programs in Spain and the EU
- Greater trust and regulatory alignment when participating in **digital platforms** and **electronic procedures**
- Assurance of **end-to-end protection** in the management of sensitive or regulated information
